

2023 Policy Agenda

NCARCOG Overview

The North Carolina Association of Regional Councils of Governments (NCARCOG) represents 16 regional councils of governments (COGs), and it advocates for regional solutions to address multi-jurisdictional issues or opportunities, coordinated state and federal program service delivery, and building strategic partnerships to improve the prosperity of rural and urban North Carolina.

Policy Priorities

1. Build partnerships and capacity for COGs to provide financial administration for local governments.

Many local governments struggle with poor financial administration in North Carolina. This leads to inaccurate financial statements, higher risk of errors and fraud, and incomplete or inaccurate information for local elected bodies to use for key decision-making for the public welfare. Local governments must meet audit, budget, and internal control requirements established by the state and national standards, and many have done so successfully over the decades. An entire generation of local government officials is leaving the workforce due to retirement, and many areas of the state find it difficult to find the qualified professionals needed to remain compliant with state and national accounting standards. COGs are an extension of local government, with professional finance staff, that are uniquely qualified to assist local governments in need of temporary and ongoing financial services. COGs have the ability and authority to partner with the Local Government Commission (LGC), North Carolina League of Municipalities (NCLM), and North Carolina Association of County Commissioners (NCACC) to meet the audit, compliance, and financial administration needs of local governments. However, additional capacity is needed to meet the financial administration needs of local governments.

Action Requested:

The NCARCOG requests the North Carolina General Assembly to appropriate \$3.52 million in recurring funding for COGs to create a financial administration program to employ 32 additional finance professionals in the 16 regions to assist small local governments with returning to a compliant status. These positions will serve as “boots on the ground.” This program will serve 60 to 120 local governments with priority for units with limited means and those units on the LGC’s Unit Assistance List.

2. Provide funding to replace the outdated and poorly functioning ARMS system for the provision of aging services within the NC Division of Aging and Adult Services.

The state developed a reimbursement system in the 1990s, called ARMS, to facilitate payment for services directed to older adults in North Carolina. The system has far exceeded its useful life and represents significant risks for failure. The following challenges and risks exist with ARMS: increased risk of security breaches due to age; increased downtime of the system for users creating inefficiencies; functional limitations to meet current operational needs; incompatibility with newer software systems; labor-intensive procedures; and other obsolete features.

A new software system creates better efficiencies, reduces risks and interruptions of services, enhances compatibility with other software platforms, improves performance measurement, and increases accountability for the use of funds.

Action Requested:

The NCARCOG requests the North Carolina Division of Health and Human Services and General Assembly to appropriate funding to replace the ARMS system. The NCARCOG (through its Area Agencies on Aging) requests to serve in a key partnership role with the development and selection of a replacement system.

2023 Policy Agenda

3. Increase funding for the Long-Term Care (LTC) Ombudsman Program in North Carolina.

LTC Ombudsmen are employed by Area Agencies on Aging (AAAs) within each COG to serve North Carolinians living in licensed long-term care facilities in our state. This includes residents in nursing homes, adult care homes, and family care homes. As a group, LTC Ombudsmen serve and protect some of the most vulnerable and needy citizens in the state in a non-regulatory role. There are about 91,000 patient beds in the state. LTC Ombudsman work to resolve complaints made by, or for, residents of LTC facilities, advocate for patients' rights and quality of care, educate consumers and LTC providers about patient's right and good care practices, facilitate community involvement through volunteers, and suggest changes to laws and regulations regarding long-term care.

The National Academy of Sciences Institute of Medicine recommends one full time equivalent (FTE) paid ombudsman per every 2,000 long-term care (LTC) beds. The current program funding is insufficient to support 45.5 full-time equivalent positions. COGs and AAAs employ only 36.5 ombudsmen and that staff level requires diverting funding from other services to achieve that level of staffing. Examples of diverted program funds include: home delivered meals, medical transportation, in-home aide, and other services. The current level of funding creates risks that LTC patient's rights and care are not fully addressed. An additional \$2.5 million is needed annually to fully fund the ombudsman program and meet LTC patients' needs.

Action Requested:

The NCARCOG requests the North Carolina General Assembly to appropriate an additional \$2.5 million in annual recurring funds to fully fund the ombudsman program.

4. Modify the Prosperity Zones to conform to COG regions.

Eight Prosperity Zones were created in 2014 when the state eliminated the previously designated economic development regions. The designation of the Prosperity Zones intended to improve collaboration among state agencies and to improve customer service. However, the Prosperity Zones do not have a dedicated administrative structure, have been largely ineffective, and duplicate efforts of COGs. Many COGs already serve as the Economic Development Administration's designated economic development districts and Appalachian Regional Commission's local development districts. The assigned geographies of the Prosperity Zones do not follow natural economic, transportation, political, or cultural patterns and are often too large to foster cooperation within those regions.

COG regions better reflect natural patterns within the state and already contain human infrastructure among a range of programs including planning, transportation, workforce development, community and economic development, etc. Using COG regions as the basis for Prosperity Zones would decrease duplication and confusion for local governments and facilitate better coordination of services.

Action Requested:

The NCARCOG requests the North Carolina General Assembly to modify the eight Prosperity Zones to conform to the 16 COG regions. When necessary, state agencies can assign multiple COG regions to state staff personnel.

2023 Policy Agenda

5. Establish COGs as the entity to develop regional pre-disaster hazard mitigation plans, and to perform regional resilience planning and coordination.

Smaller units of local governments within each COG region may have a limited capacity to apply for emergency management grants, and successfully manage all the training and compliance requirements for the duration of the grant. North Carolina COGs have successfully managed regional disaster and recovery efforts and have extensive experience with emergency management grants. The COGs could serve as designated grant recipients, grant administrators, provide regional communication and coordination activities, and provide the necessary technical assistance to meet grant compliance standards. COG involvement would enhance recovery and resiliency efforts and allow more local governments to participate in funding opportunities.

COGs have coordinated, planned, and delivered planning and programming services on a multi-jurisdictional basis for the past fifty years. Pre-Disaster Hazard Mitigation (PDM) plans, implemented with assistance from the Building Resilient Infrastructure and Communities (BRIC) grant program require local government leaders from multiple cities and counties to develop a coordinated plan to identify goals, action steps, and projects to limit the impact of natural and man-made disasters. COGs already engage in resiliency planning efforts within their regions, and each COG engages with local government leaders on a multi-jurisdictional basis. PDM plans are required to be performed every five years, and regularly assessed to determine progress towards implementing the plan. COGs can provide planning professionals to work with local government leaders to develop PDM plans, and to work with local governments to implement the high priority projects to limit the impacts from future disasters.

Action Requested:

NCARCOG requests legislative and policy authorization for the North Carolina Department of Emergency Management to use COGs to provide hazard mitigation planning services, training, grant administration, grant application assistance, or any other service requested by a qualifying local government in order for it to utilize BRIC and other Federal Emergency Management Agency funds. The NCARCOG requests recurring funding to build capacity to assist local communities with hazard mitigation and resiliency planning and project implementation. The NCARCOG intends to submit a funding request in 2024.

6. Support the expansion of high-speed broadband throughout North Carolina.

The availability of high-speed broadband, defined by the FCC a 25 megabits per second download speed and 3 megabits per second upload speed, is critical to the economic resilience of local governments throughout North Carolina. The COVID-19 pandemic has highlighted the need to increase availability of high-speed broadband to ensure continuation of local government services, local economies, education, workforce training, and nearly every other aspect of private or public operations that rely on internet connectivity to function.

Action Requested:

NCARCOG supports legislative and policy that increases the availability of high-speed broadband throughout North Carolina and urges the members of the North Carolina General Assembly to continue to provide funding to study, build, and upgrade broadband infrastructure to ensure the private and public entities across the state are able to function and compete in the global economy while maintaining safe and effective public services vital to the health and welfare of North Carolina citizens. The NCARCOG request the General Assembly and other state leaders to use COGs as a mechanism for local and regional broadband planning and implementation efforts.

2023 Policy Agenda

- 7. Advocate for additional funding for aging, community development, infrastructure, and workforce programs.** COG regions across the state are working with local government leaders to plan and coordinate services and programs for a rapidly increasing older adult population, expand or upgrade water and sewer capacity to accommodate growth and development within each region, developing partnerships to improve access to workforce housing, and coordinating workforce and/or economic development opportunities with area employers to provide the skilled workers needed for economic growth.

Action Requested:

- Provide additional funding for the Home and Community Care Block Grant (HCCBG) to support growing older adult populations.
- Continue increased funding for water and sewer infrastructure projects to facilitate community and economic development.
- Improve workforce development services by seeking approval from the US Department of Labor to delegate funding and operations for Wagner-Peyser related services to local workforce development boards.

- 8. Build strategic partnerships to improve regional delivery of services.**

Rural and urban local governments established COGs to come together to solve local and regional issues. COGs play a role in convening leaders within each region and coordinating with multiple types of organizations to deliver programs, projects, or services. COGs are best positioned for the delivery of federal, state, and local programs or services on a regional basis due to the ability to scale a service or program to meet the needs of each region, or to work cooperatively across multiple regions when needed or required.

Action Requested:

Advocate for an increase in the use of COGs to administer and/or implement governmental services and programs that are intended to be delivered on a multi-county basis. Advocate that COGs serve as the default mechanism to delivery regionally based services. Oppose the creation of new regional offices or regional service areas that split COG regions. Request state agencies and the General Assembly consider modifying other state-designated regions to align with COG regions or to avoid splitting COG regions.

2023 Policy Agenda

9. Modify rules, regulations, or legislation to include COGs as eligible entities for state and federal grants.

The federal Office of Management and Budget (OMB) Circular 2 CFR 200. 64 (l) identifies a Council of Governments (COG) as an eligible local government for the purpose of applying for and receiving federal grant awards. NCGS 160A-475(1) and 153A-395 allow COGs to apply for, accept, receive, and dispense grants made available to it by the State of North Carolina, the United States of America or any of its agencies, any local government, and any private or civic agency. Some program rules and grant applications, at the state and federal levels, do not list COGs as eligible program administrators, applicants, or sub-recipients. These limitations prevent COGs from applying for regional based grants, and/or delivering regionally significant programs in each COG service area.

Action Requested:

NCARCOG requests the members of the North Carolina General Assembly add Councils of Governments to the list of eligible entities for state and federal grant programs. In addition, NCARCOG requests the members of the North Carolina delegation to the U.S. House of Representatives, and the U.S. Senate also add Councils of Governments to the list of eligible entities for federally funded grants and programs.
